PROFESSIONAL SUMMARY

As a **dynamic Project Coordinator and MERN Stack Developer**, I have a proven track record in **client relationship management**, **project delivery**, and **sales growth**. With expertise in **React**, **Node.js**, **Express**, and **MongoDB**, I bridge the gap between technical teams and clients to ensure seamless execution of projects. My experience includes **freelance development**, where I successfully delivered tailored solutions, driving user satisfaction and project success. Passionate about continuous learning and applying best practices, I am eager to leverage my technical and communication skills in a developer role to enhance user experiences and contribute to business growth.

EXPERIENCE

Project Co-Ordinator & Developer - Nuetrino Code Studio   Sep-2024 -Present

Promoted from Developer to Project Coordinator after three months in the development team.
As **Project Coordinator**, I manage projects from start to finish, balancing **development** and **leadership**. I work with cross-functional teams to ensure **quality**, **timely delivery**, and **customer satisfaction**.

- **Seamless Transition:** Used my **development experience** to move into the **Coordinator role** smoothly.
- **Technical Expertise:** Applied my **development** skills to communicate technical details to **clients.**
- **Sales Collaboration:** Worked with **sales** to align **technical solutions** with client needs.
- **Improved Efficiency:** Streamlined **internal processes** to boost **team productivity.**

PROJECT EXPERIENCE

Academicases - E-Learning Platform   **Frontend Code, Backend Code**

Academicases is a full-featured e-learning platform built using modern web technologies. The frontend is developed with **React, Redux, and TypeScript**, ensuring a dynamic and responsive user experience. The backend is powered by **Node.js, Express, and MongoDB**, offering a scalable and efficient server-side environment. The platform also integrates **Stripe** for secure payment processing, **Socket.IO** for real-time communication, and **JWT** for secure authentication. **Tailwind CSS** is used for styling, providing a sleek and intuitive UI, while **Cloudinary** handles media management. The project follows the **Repository pattern**, promoting clean code and maintainability.

PageFusion – PDF Processing Web Application   **Frontend Code, Backend Code**

PageFusion, A dynamic web application built with the **MERN stack**, focusing on PDF uploading, page selection, and PDF generation. The frontend utilizes **React** with **Redux** for state management, **Tailwind CSS** and **Daisy UI** for styling, and **TypeScript** for type safety. Key features include user authentication, secure routes, token handling, and lazy loading for optimized performance. The backend, powered by **Node.js** and **MongoDB**, offers robust **PDF splitting, merging, and file management functionalities**, with **JWT-based** authentication for security.

Rustic Lens- E-Commerce Platform   **Code**

Rustic Lens is a specialized **e-commerce platform** dedicated to cameras and related gadgets. Built with **Node.js, Express, and MongoDB**, the platform features a sleek **EJS** interface for a seamless shopping experience. Administrators benefit from robust tools for managing products and users, generating sales reports, and handling custom orders. Users can explore a wide range of camera equipment with advanced search and filtering options, utilize a user-friendly cart, and complete transactions securely via **Razorpay**.

MINI PROJECTS

NextJS Projects
- URLSnip (Live, Git)
  - URLSnip is a web application developed using **Next.js** and **MongoDB**, designed to **shorten long URLs into concise, shareable links**. Key features include **customizable short links**, an analytics dashboard for

tracking link performance, easy URL management, and API access for integration. The app prioritizes security, provides a mobile-friendly design, and allows users to manage links efficiently.

- Spotify Clone ([Git](#))

ReactJS Projects

- User Management ([GitHub](#))
  - **User Management** is a hands-on project designed to deepen expertise in **React and Redux**. This application features a robust admin module for user operations, including adding, editing, removing, and searching usersThe tech stack includes **Node.js, Express, MongoDB, React, and Redux**, augmented by external modules such as **Multer** for image storage, **Bcrypt** for password hashing, and **JWT** for secure token management
- Netflix Clone using TMDB API ([GitHub](#), [Live](#))
  - **Netflix Clone** is a project focused on recreating the Netflix user interface to enhance skills in **React and API integration**. The application enables users to browse a variety of movie titles, view images, and watch trailers. Built with **React and CSS**, the project uses **TMDB** for data fetching and **Axios** handling.

EDUCATION

BROTOTYPE	**Calicut**
Self-Learning Platform	**2023- Sep 2024**

- Self-learning program focused on MERN Stack Development
- Engaged in weekly interviews with industry professionals through Brototype, gaining valuable insights into current software development trends, coding best practices, and career advice. Completed comprehensive courses on Full-Stack Web Development, and developed practical skills by working on real-world projects, including building interactive web applications and solving coding challenges.

CALICUT UNIVERSITY	**Priyadarshini Arts & Science College, Malappuram**
Bachelor of Computer Applications	**2020-2023**

- Major: Computer Application
- CGPA: 5.417
- Projects: Virtual Classroom System
  - The Virtual Classroom System is a group project designed to support remote learning through live video and audio. It includes features such as real-time chat, video conferencing, and the sharing of study materials. In this project, I contributed to backend development using Python and MySQL and implemented real-time communication with Socket.IO. The system allows admins to manage users and post notices, HODs to handle registrations and timetables, teachers to upload materials and host video calls, students to access resources and join classes, and parents to view notices and communicate with teachers.
  - Technologies Used: Python, HTML, CSS, Bootstrap, Socket.IO, MySQL.

HIGHER SECONDARY	**GHSS Puthuparamba, Kottakkal**
Computer Application Commerce	**2018-2020**

ADDITIONAL INFORMATION

- Sales Coordination Skills
  - Client Management: Building strong client relationships and tailoring solutions to their needs.
  - Project Delivery: Ensuring timely, high-quality project completion while maintaining client satisfaction.
  - Sales Support: Assisting sales teams with proposals, demos, and technical solutions.
- Technical Skills:
  - Frontend Development: React, Redux, Next.js, HTML, CSS, JavaScript, TypeScript, Bootstrap, Tailwind CSS
  - Backend Development: Node.js, Express.js, MongoDB, SQL, Firebase, Supabase
  - Tools & Technologies: Git & GitHub, REST API, Postman, AWS (EC2, Route 53), Nginx, Stripe, Razorpay, Socket.IO, JWT, Payment Integration
  - Design: Adobe XD, Figma, Adobe Photoshop
  - Additional: EJS, MVC Patterns, Repository Patterns, Jitsi, Ajax, Data Structures
- Profiles:
  - [Leetcode](#), [GitHub](#), LinkedIn
- Languages Know: English, Malayalam.
